Thursday

Precipitation not likely around SGP-CF on Thursday AM with better chance over northeastern CO.

ER2 currently scheduled for 1200 UTC take off for mission over northeastern Colorado in the vicinity of CSU-CHILL radar to sample rain/rain showers in wrap around moisture Thursday morning. Likely ER-2 only mission as Citation was diverted to Tulsa (and is currently still there waiting for weather over Ponca City to clear).

Will update/confirm at T-5 (0700 UTC/0200 CDT!)

Friday

Precipitation chances not looking particularly favorable on Friday over OK, especially near SGP-CF. Likely down day.
